

Balosh Integrated Services Limited — Company Brochure

COVER PAGE

We open important doors!

Securing and Managing Nigeria's Most Critical Spaces

Our Core Services:

Access Control | Automated Entrances | Car Parking Solutions | Toll Road Management | Security Systems | Operations & Support

Founded 2005 | 20 Years of Leadership | 200,000+ Daily Check-ins | 100+ Staff Nationwide | OEM Hardware Built for Nigeria

The Infrastructure Behind Nigeria's Safest Spaces

- Since 2005, Balosh Integrated Services Limited has built its reputation on three uncompromising pillars: **reliability, credibility, and quiet dominance.**
- We operate end-to-end — design, development, installation, and ongoing support — all in-house, with no middlemen and no gaps in accountability.
- From the terminals that move millions to the institutions that govern a nation — the names that define Nigeria's most critical spaces have one thing in common. **Balosh.**
- For 20 years, Nigeria's airports, government institutions, major retail destinations, corporate campuses, and critical national infrastructure have placed their security and access operations in our hands. That trust is not given lightly — and we have never taken it for granted.

We don't rely on advertising. We let our work speak for itself

We are builders, operators, and long-term partners — trusted by the organizations that cannot afford to get access control and security wrong.

At a Glance

- Founded: 2005
- Staff: 100+ Nationwide
- Daily Check-ins: 200,000+
- Capability: Proprietary OEM Hardware
- Delivery: End-to-End — Hardware, Software, Installation & Support
- Growth Model: Referral-Driven, Client-Trusted

PAGE 2 — THE BALOSH ADVANTAGE

Why Leaders Choose Balosh

There are many vendors but there is only one Balosh.

Here is what sets us apart:

- Proven Performance in Nigeria's Toughest Environments

Our systems are engineered specifically for Nigeria's infrastructure realities — power variability, climate, scale, and complexity.

- End-to-End Ownership

From hardware design to software, installation, and ongoing support — one accountable partner.

- Proprietary OEM Hardware

Nigerian-condition hardware designed for reliability, faster parts availability, and easier customization.

- World-Class Technology Partnerships

Global brands fused with local practicality for optimal outcomes

- Referral-Built Reputation

Clients become advocates; results drive growth for 20+ years.

- Long-Term Partnership Culture

We don't complete a project and disappear. Our relationships are measured in years and decades. Your uptime is our reputation.

Balosh provides end-to-end solutions across five core domains, ensuring cohesive, single-vendor accountability from design through deployment and ongoing support.

1. Access Control

- Hardware & software for secure, scalable access management
- Biometric options (fingerprint, face, iris, multi-modal)
- Time & attendance integration, visitor management, and workforce security
- Full service: design, installation, integration, and support

2. Automated Entrances

- Automatic doors & gates, barriers, bollards, turnstiles, roller shutters,
- High-traffic handling with robust security integration
- Integrated with access control, ANPR, and dashboard monitoring

3. Car Parking Solutions

- End-to-end car park ecosystems: design, supply, installation, operation, and maintenance
- Automated barriers with ticketing, ANPR integration, and cashless payments
- Occupancy monitoring with real-time dashboards
- Optional lease/operational models

4. Toll Road Management

- Complete toll plaza hardware and software
- Multi-lane toll processing with cash, card, and RFID payments
- Real-time revenue reporting, audit trails, and nationwide maintenance
- Robust support for Nigeria's road infrastructure

5. Security Systems

- Comprehensive screening and threat mitigation
- Walk-through metal detectors, baggage scanners, under-vehicle inspection systems, etc
- Integrated with access control, CCTV, and incident management
- End-to-end implementation and 24/7 support

Cross-Cutting Capabilities

- Custom Software Development
- Equipment Rentals
- System Integration & API Access

PAGE 4 — PROJECTS IN FOCUS

Proven at Scale. Trusted by the Best.

Balosh has delivered integrated access control solutions across some of Nigeria's most demanding and high-profile environments. Our clients include airports, gated communities, government agencies, major shopping malls, and top-tier private institutions.

MMA2 Airport Car Park, Lagos — Case Study

The Challenge

MMA2 is one of Nigeria's busiest airports — and its multi-storey car park wasn't keeping up. Outdated equipment cost more than double modern alternatives, spare parts had to be imported (causing costly delays), and system failures forced manual processing that left passengers stuck in queues — still being charged while they waited. On top of this, there was no vehicle classification system and no ANPR technology, creating revenue leakage and bottlenecks at every turn.

The Solution

We replaced the ageing infrastructure with modern, cost-effective equipment at less than half the previous price. Paper tickets gave way to reusable plastic cards, eliminating imported consumables entirely. A vehicle classification system was introduced to enable accurate, differentiated tariffs — and ANPR cameras were deployed to handle lost tickets swiftly and without dispute. Trained staff and locally stocked spare parts ensured rapid response to any issues.

The Results

- **Major cost savings** on both equipment and consumables
- **Near-zero downtime** — 24/7 reliability in a 24/7 environment
- **Increased revenue** through accurate vehicle classification and tariffing
- **Faster throughput** — queues eliminated, passengers moving freely
- **Lost tickets resolved instantly** via number plate lookup

The MMA2 transformation proves what the right technology and the right support can deliver — even in the most demanding environments.

The Challenge

For one of Lagos' most prestigious members-only institutions, access control is about far more than security — it's about prestige and member trust. Yet frequent turnstile breakdowns were creating dangerous gaps in security, and unreliable access cards made controlling entry nearly impossible. Behind the scenes, a complete disconnect between the accounts department and access control software meant staff had to manually activate and deactivate member access — an error-prone process that left lapsed and unauthorised memberships slipping through undetected.

The Solution

We moved quickly — immediately repairing existing turnstiles and replacing the access control software to restore security without delay. From there, we delivered a full upgrade:

- **Proprietary turnstiles** engineered specifically for the Nigerian environment
- **Facial recognition & QR code readers** introduced alongside card access for seamless, flexible entry
- **Full integration** between accounting and access control software — member access now activates or deactivates automatically based on subscription status
- **A formal SLA** guaranteeing proactive maintenance and rapid response times

The Results

- **Zero unauthorised access** — entry is strictly controlled, guests included
- **Zero downtime** — a complete reversal from constant failures
- **Hundreds of staff hours saved** through automated account management
- **Measurable increase in membership dues** payment and revenue
- **Full entry records** for members, staff and guests — anytime, anywhere
- **Adopted by HR** for staff time and attendance tracking

The Ikoyi Club project is proof that the right access control system doesn't just secure a building — it protects an institution's identity.

The Challenge

Ikeja City Mall's car park had been poorly managed for years. Frequent system failures — some lasting up to three months — were caused by a lack of spare parts and undertrained engineers. Fixing problems meant flying in specialists from South Africa, leaving the facility crippled in the meantime. A chronic shortage of imported ticket consumables forced heavy reliance on manual ticketing, opening the door to revenue leakage and fraud while frustrating shoppers and damaging the mall's reputation.

The Solution

Taking over operations on 1st July 2024, we delivered a complete reset:

- **Paper ticketing replaced** with reusable plastic cards — eliminating imported consumables, reducing mechanical failures and cutting paper waste
- **Full staffing overhaul** — trained personnel and on-site standby engineers replaced, ending the need for costly overseas specialists
- **Comprehensive spare parts stock** maintained locally at all times — keeping resolution times minimal and emergency imports firmly in the past

The Results

- **Near-zero downtime** — compared to failures lasting months under the previous operator
- **Up to 60% revenue increase** in some months — with manual processing and fraud eliminated
- **Faster throughput** — reusable cards process vehicles quicker, reducing congestion at peak times
- **Improved shopper experience** — faster, smoother and frustration-free parking

The Ikeja City Mall turnaround shows exactly what the right technology, the right people and the right preparation can deliver.

PAGE 7 — TEAM & CULTURE

The People Who Make It Happen

Behind every door Balosh opens is a team of engineers, technicians, software developers, and support specialists who take personal ownership of client outcomes.

100+ Professionals. Nationwide.

Our people are deployed across Nigeria — not just headquartered in one city. When a client needs support, we are already close.

What Defines Our Culture

Deep Engineering Bench

In-house hardware design, in-house software development, in-house installation teams. Our engineering capability is not outsourced — it is our core.

Local Knowledge + World-Class Technology

We understand Nigeria: the infrastructure, the environments, the pressures. We combine that knowledge with global technology partnerships to deliver solutions that actually work here.

Long-Term Relationships

We measure success in years, not projects. Our clients trust us with their most critical infrastructure — and that trust is earned and maintained through consistent performance, transparency, and accountability.

Continuous Development

Our engineers stay current with global access control technology. Our software team continuously improves our proprietary platforms. We grow so our clients don't have to change vendors.

Accountability First

We are not a vendor you call and wait for. We are a partner you rely on. Accountability is non-negotiable in our culture — because our clients' security is non-negotiable.
